About Me

Full Stack Developer with 4+ years of experience specializing in .NET, React, and SQL. Passionate about leveraging AI tools to optimize development workflows, enhance productivity, and build efficient, scalable applications.

Skills

Programming Languages

C# TYPESCRIPT JAVASCRIPT JAVA SQL

Special Case

HTML CSS

AI Tools

Frameworks

.NET REACT NODE JS

Databases

MICROSOFT SQL SERVER MONGODB

Other Tools

Education

Bachelor of Science in Digital Industry Integration (DII)

College of Arts, Media and Technology, Chiang Mai University 2020 - 2023

Emphasizes the integration of digital technologies with business processes, encompassing data analytics, software development, and digital transformation to improve organizational performance and solve real-world industry problems.

Experience

Full Stack Internship

AppMan Co., Ltd. FYI 2021 - 2023

- Insurance Web API [C# .Net Framework, Telerik]

Developed a Web API for an insurance web application to support core system operations by integrating and managing data between Frontend, Backend, and external systems. Ensured accuracy, performance, and security through a structured and reliable architecture.

- Designed and developed RESTful APIs using C# and .Net Framework
- Integrated and managed database operations for policies, customers, and related insurance data
- Implemented and enhanced Create, Read, Update, and Delete (CRUD) functionalities
- Applied business logic and data validation based on insurance system requirements
- Tested APIs and performed bug fixing to ensure system stability and reliability
- Collaborated with Frontend developers and cross-functional teams for system integration
- Prepared API documentation for internal development and maintenance

Full Stack Developer

SCG Packaging Public Company Limited (SCGP) 2023 - 2026

- Store Management System [C# .Net framework , Telerik]

Developed a full-scale enterprise store and inventory management system used for daily warehouse operations, covering the complete material flow from receiving to issuing and picking.

- Designed and implemented Goods Receive, Goods Issue, and Pick List workflows to control inventory movement and reduce manual tracking errors
- Built real-time stock and transaction reporting to support warehouse staff and management decision-making
- Developed UI and data-driven modules using Telerik components to support high-volume operational usage

- Audit Management System [C# .Net React.TS]

Built a full-stack web platform to support enterprise audit and ESG (Environmental, Social, Governance) risk management across multiple departments.

- Developed audit planning, risk evaluation, and ESG scoring modules to support regulatory and internal compliance
- Implemented role-based workflows for auditors, reviewers, and management
- Created interactive dashboards and reports using React TypeScript for tracking audit results and ESG performance
- Integrated front-end and back-end services via .NET APIs for secure and structured data processing
